INTRODUCTION

Data integration between ArchiOffice® (by BQE Software) and QuickBooks® (by Intuit) can make your time billing, accounting, and financial management tasks easier. The full-featured ArchiOffice helps you manage your company, whether your time, expense, billing and reporting needs are simple or you require complex billing, reporting and management capabilities. With ArchiOffice, you are equipped with a powerful office and project management solution for architects. QuickBooks is a business accounting software that provides solutions such as general accounting, accounts receivable, accounts payable, online banking, reporting, payroll, and other functions. Integrated, ArchiOffice and QuickBooks deliver a virtual program that *ensures data accuracy, eliminates time-consuming duplicate manual entry, enhances flexibility, and increases control over your bottom line.*

Integration means data from one program transfers to another. This sharing offers many benefits. You control what data transfers to and from ArchiOffice using synchronization settings. Your preferences tell ArchiOffice exactly how you want it to interact with QuickBooks. ArchiOffice automatically creates smart connections using your settings and its built-in intelligence.

The goal of the **ArchiOffice↔QuickBooks Advanced Integration Guide** is to help you effectively integrate data between ArchiOffice and QuickBooks. ArchiOffice controls integration, enabling you to choose accounts, what data flows between the programs, and much more.

You can contact us at support@ArchiOffice.com to help you with the data integration process. Check out [ArchiOffice Training](#) for a standard or custom training course on data integration with QuickBooks. BQE Software also offers [Consulting Services](#) in these areas.

How to Use This Guide

The [How Integration Works](#) section is written for users with a non-technical background, explaining the integration rules and settings built into ArchiOffice. Understanding what type of data can be shared and which rules apply during synchronization will help you visualize what is happening behind the scenes.

The instructions guide you through the initial integration set up, whether you are a new or existing ArchiOffice or QuickBooks user. It covers a variety of [Initial Integration](#) scenarios. Use the instructions for the scenario that best fits your company.

The [Quick Check](#) section provides specific guidance on how to validate the accuracy of your data after completing the synchronization process. [Day-to-Day Integration Settings](#) provides suggestions for fine-tuning your synchronization settings for normal, day-to-day synchronization and also points out the industry's best practices.

If you have been using ArchiOffice and QuickBooks both and now plan to use them as integrated programs,

it is important that you develop a proper integration plan. You can use the ArchiOffice-QuickBooks [Smart Match tool](#) to match up records that need to be linked.

Software Editions Supported

All ArchiOffice editions integrate with the following QuickBooks editions:

- QuickBooks Pro/Premier/Enterprise Solutions editions, including the Accountant's Edition (2010 and later)
- QuickBooks Canadian edition (2012 and later)
- QuickBooks UK edition (2012 and later)
- QuickBooks US edition (2012 and later)

QuickBooks Plus edition is not supported.

HOW INTEGRATION WORKS

It is helpful to understand the basics of the ArchiOffice↔QuickBooks integration, whether or not you have a technical background. This can help you visualize what is happening behind the scenes as ArchiOffice manages the transfer of data to and from QuickBooks.

There are some differences between QuickBooks and ArchiOffice that need to be understood in order to ensure a smooth and accurate data integration. ArchiOffice is *project-centric* and supports a hierarchical structure while QuickBooks is *client-centric* and uses a flat project structure. Each record common to ArchiOffice and QuickBooks shares a unique Link ID that identifies them as related. This *does not mean* data in both databases is *exactly* the same, only that they share common data. ArchiOffice Project records contain data and options that QuickBooks Job records do not and vice versa. What is important for integration are that the two programs share key data.

Back up your data in QuickBooks and ArchiOffice prior to data synchronization.

The table below shows the direction data can *potentially* flow between ArchiOffice and QuickBooks. Whether it flows in one direction or the other (or both directions) depends on choices made on the ArchiOffice-QuickBooks Integration Settings screen. You can determine how data flows *to* and *from* ArchiOffice and also which General Ledger accounts in QuickBooks are posted.

ArchiOffice Table Name	Dataflow	QuickBooks Table Name
Job Codes	↔	Service Items
Account Codes (Expenses)	↔	Other Charge Items
Contacts (Employees) *	↔	Employees
Contacts (Vendors)*	↔	Vendors
Contacts (Clients)*	↔	Customers
Projects	↔	Jobs
Time/Expense (Time Card)	↔	Time Tracking (Time Records)
Time/Expense (Expenses)	←	Bills and Checks
Invoices	↔	Invoices
Transactions (Payments)	↔	Payments

*When the Billing option is checked, all Contacts transfer as Customers.

Also see the [ArchiOffice Help](#) for ArchiOffice↔QuickBooks Integration

As you can see above, integration between ArchiOffice and QuickBooks is very comprehensive. Not only are invoices sent to QuickBooks to post revenue and receivables, the virtual database for the two programs includes clients, projects, employees, vendors, job codes, etc.

After initial integration, you can set integration rules so that master information transfers only from ArchiOffice to your accounting package. You would choose 'Do not Get Data' (i.e., turn off the flow of data) in the Get Settings. In other words, you decide to maintain master data in ArchiOffice only. It flows to your accounting package, updating its database and keeping information synced. You can be just as specific when assigning General Ledger accounts to service, expense and invoice items.

Bottom Line: The major benefit is that you do not have to re-enter ArchiOffice data into QuickBooks. ArchiOffice manages the process, using your synchronization settings.

Integration Rules

To ensure accuracy and a successful data transfer, the ArchiOffice↔QuickBooks Integration uses the following set of rules:

Some of these rules might not be relevant for the first-time data transfer between QuickBooks and ArchiOffice but will apply in future data synchronization.

1. **Operating System:** ArchiOffice↔QuickBooks Integration works only on Windows operating system (PCs and not Mac).
2. **Company:** Accounting systems accept the transfer of time, expense, invoice, and payment records only if the record dates are after the start date of the Company.
3. **Date:** When data is transferred from QuickBooks to ArchiOffice, the system date is converted to UTC (Coordinated Universal Time) and is recorded in the Last Modified date field for each record.
4. **Placeholder Data:** Because QuickBooks does not require the same fields of data as ArchiOffice, and because it might not track the same data as ArchiOffice (does not have the same fields), ArchiOffice inserts placeholder data in the required fields –‘FromQuickBooks’.
5. **Synchronization Order:** When you send or get data on-demand, using the Send to QuickBooks or Get from QuickBooks options, follow the order of the listed menu items. For example, sync Clients before Projects and Invoices before Payments.
6. **LinkID:** ArchiOffice automatically creates an internal unique identifier called ‘QBLinkID’. It is saved in the database for the records that have been transferred between the two programs and are linked.
7. **Employees:** QuickBooks employee records are transferred to ArchiOffice as contacts with their type set to *Employee*. A corresponding ArchiOffice *User* profile is also automatically created. Employee contacts are transferred to QuickBooks as Employees with all details.

If the Billing option is selected for an ArchiOffice User or Employee, this record is transferred to QuickBooks as both a Customer and an Employee with all details.

8. **Contacts:** All Contacts that have the Billing option checked are sent to QuickBooks as Customers irrespective of the Type.
9. **Vendors:** Only contacts selected as Vendor Type on the ArchiOffice-QuickBooks Integration Settings screen are transferred to QuickBooks as vendors.
10. **Address:** In QuickBooks, addresses are entered in four one-line fields, while in ArchiOffice fields

are assigned for each component of the address. To ensure accuracy and consistency during data transfer, make sure your address in QuickBooks is entered according to the U.S. Postal Service Standard:

Address Line 1

Address Line 2 (optional)

City, State, Zip/Postal Code (comma separation is optional)

11. Service Items:

- Only Job Codes assigned to projects will be sent to QuickBooks. Description of the sent job codes will include the project to which it is assigned.
- New Service Items created in QuickBooks will be populated into the Preferences screen in ArchiOffice.

12. Expense Items:

- QuickBooks Other Charge Items are transferred as Account Codes in ArchiOffice with the account type as 'Expense'. They can be viewed in Preferences-Billing-Accounting screen.
- Billed expenses transferred from QuickBooks can be unbilled and then deleted from ArchiOffice.

13. Projects:

- When sub-jobs or project phases are transferred from QuickBooks to ArchiOffice, they are saved as Project Phases in ArchiOffice.
- In ArchiOffice, every project has a phase and work is done only through phases. During synchronization, if a QuickBooks project does not have existing phases, a phase labeled Legacy will be created for the project in ArchiOffice, because, unlike QuickBooks, time and expenses can only be recorded against phases.

If a QuickBooks project has phases but also has time and expense allocated directly to the project, a Legacy phase will still be created in ArchiOffice during the synchronization process.

- Apart from this, the Service Items used in QuickBooks time entries for each phase are assigned as Job Codes to that phase in ArchiOffice. All Employees used in time entries for each phase are assigned as Team Members for parent projects.
- When Jobs are transferred from QuickBooks, a user 'FromQuickBooks' is automatically assigned to the project as a Project Leader. It is because when a check against this project

is transferred, it will be recorded as an expense using this Project Leader.

14. Time Entry:

- You cannot transfer a time-entry older than Jan 1, 1901 to ArchiOffice. If a time entry older than this is sent to ArchiOffice, it will be saved with the date Jan 1, 1901.
- When a time entry or an invoice is transferred from ArchiOffice to QuickBooks, it cannot be transferred again. In other words, changes made to transferred invoices and time entries will not be transferred to QuickBooks.
- When transferring time entries to QuickBooks, only basic information like Project, Job Code and Hours is sent. The associated taxes can be seen as line items when we send the related invoices to QuickBooks.
- When time entries are transferred from QuickBooks into ArchiOffice, following scenarios are possible:
 - If time entry is against a Job, a Phase called 'Legacy' is created for this project and then that entry is recorded against it.
 - If time entry is against a Customer, a Project and a Phase called 'Legacy' is created and then that entry is recorded against it.

15. Expense Entry:

- Expenses can be marked as Billable or Non-Billable and transferred with their status from QuickBooks to ArchiOffice.
- When expenses are brought from QuickBooks to ArchiOffice (expenses that were originally entered in QuickBooks as Expenses or Items), they transfer as QBExpense along with the description. However, if they are entered as Items, they transfer as FromQuickBooks.

When expenses are transferred from QuickBooks into ArchiOffice, following scenarios are possible:

- If expense entry is against a Job, a Phase called 'Legacy' is created for this project and then that entry is recorded against it.
- If expense entry is against a Customer, a Project and a Phase called 'Legacy' is created and then that entry is recorded against it.
- If expense entry is against a Vendor that is not assigned to a Job, the vendor is assigned to that Project on the fly.
- If expense entry is against a Charge Item not assigned to a Job, a default Account Code called 'FromQuickBooks' is used.

16. Invoices:

- Only Hourly and Stipulated Sum invoices are transferred from ArchiOffice to QuickBooks.
- All invoices transferred from QuickBooks are recorded as Stipulated Sum invoices in ArchiOffice.
- When transferring invoices to QuickBooks, separate line items are created for taxes, service amount, and expense amount. Markup is added to the expense amount.
- Pending invoices in QuickBooks cannot be transferred to ArchiOffice. Draft invoices in ArchiOffice do not transfer to QuickBooks.
- If a discount is applied to an invoice using the 'Discount and Credits' option on the Payment screen in QuickBooks, ArchiOffice will *NOT* transfer this payment. We recommend that you use the Credit Memo option in QuickBooks to discount an existing invoice properly. Credit memos are transferred from QuickBooks to ArchiOffice as invoices with a negative amount so as to balance the accounts. The invoice number is set as *CM + Reference Number* of the credit memo.
- While transferring invoices, details like associated items, units, and rates can also be transferred from QuickBooks.
- When you get invoices from QuickBooks, credit payments also get transferred to ArchiOffice.
- Invoices and payments in QuickBooks should be linked to Jobs, not Customers. This is because in ArchiOffice invoices and payments are associated with jobs and not directly with a client. In QuickBooks, you can associate invoices and payments directly with the client. In order to get these invoices and payments, ArchiOffice will create a project on the fly based on the client and associate all these transactions to this project.

We highly recommend that prior to the first synchronization, all invoices should be moved to the project. Syncing invoices directly from the client can result in complications.

17. Retainers:

When transferring retainers to QuickBooks, it saves them as Client Credits in a liability account.

- The retainer shows up in QuickBooks only if you have applied it to the invoice in ArchiOffice; otherwise, if you apply the retainer to the project, it will not sync to QuickBooks.
- 'From Retainer' is sent to QuickBooks as a \$0 invoice with the following line items (this is

important for cash basis of accounting):

- AORetainerChargeItem
- AORetainerPayment
- A retainer refund transaction in ArchiOffice is transferred to QuickBooks where it creates a journal entry with the following line items:
 - Credit: Undeposited Funds Account
 - Debit: AOUnearnedRet Account
- A retainer transfer transaction in ArchiOffice is transferred to QuickBooks where it creates a journal entry with the following line items:
 - Credit: Undeposited Funds Account using destination project
 - Debit: AOUnearnedRet Account using source project

18. Payments:

- If a payment was applied to a client in QuickBooks and then invoices related to jobs were paid, it gets transferred as Client Payment and is associated to the correct job.
- Payments from QuickBooks do not transfer to ArchiOffice if there is no invoice in ArchiOffice to which the payment amount was applied (the invoice does not exist in ArchiOffice). Similarly, payments from ArchiOffice do not transfer to QuickBooks if the invoice does not exist there.
- Credit type payments are transferred between ArchiOffice and QuickBooks.
- When paying an invoice in ArchiOffice using a retainer, ArchiOffice debits the liability account in QuickBooks.
- When we send a payment applied to multiple invoices to QuickBooks, it is not sent over as a separate full-fledged payment but rather as a line item of the main payment.
- Transactions are transferred to QuickBooks as cash and not as check.
- Payment refunds do not transfer to QuickBooks.

Integration Settings

In ArchiOffice, you can specify data transfer rules and settings in the ArchiOffice-QuickBooks Integration Settings screen. These settings are used as defaults when you choose to synchronize data between ArchiOffice and QuickBooks.

Using the ArchiOffice-QuickBooks Integration Settings screen, you can specify the following:

- [Send Settings](#)
- [Get Settings](#)
- [Account Assignment](#)
- [Payroll Settings](#)

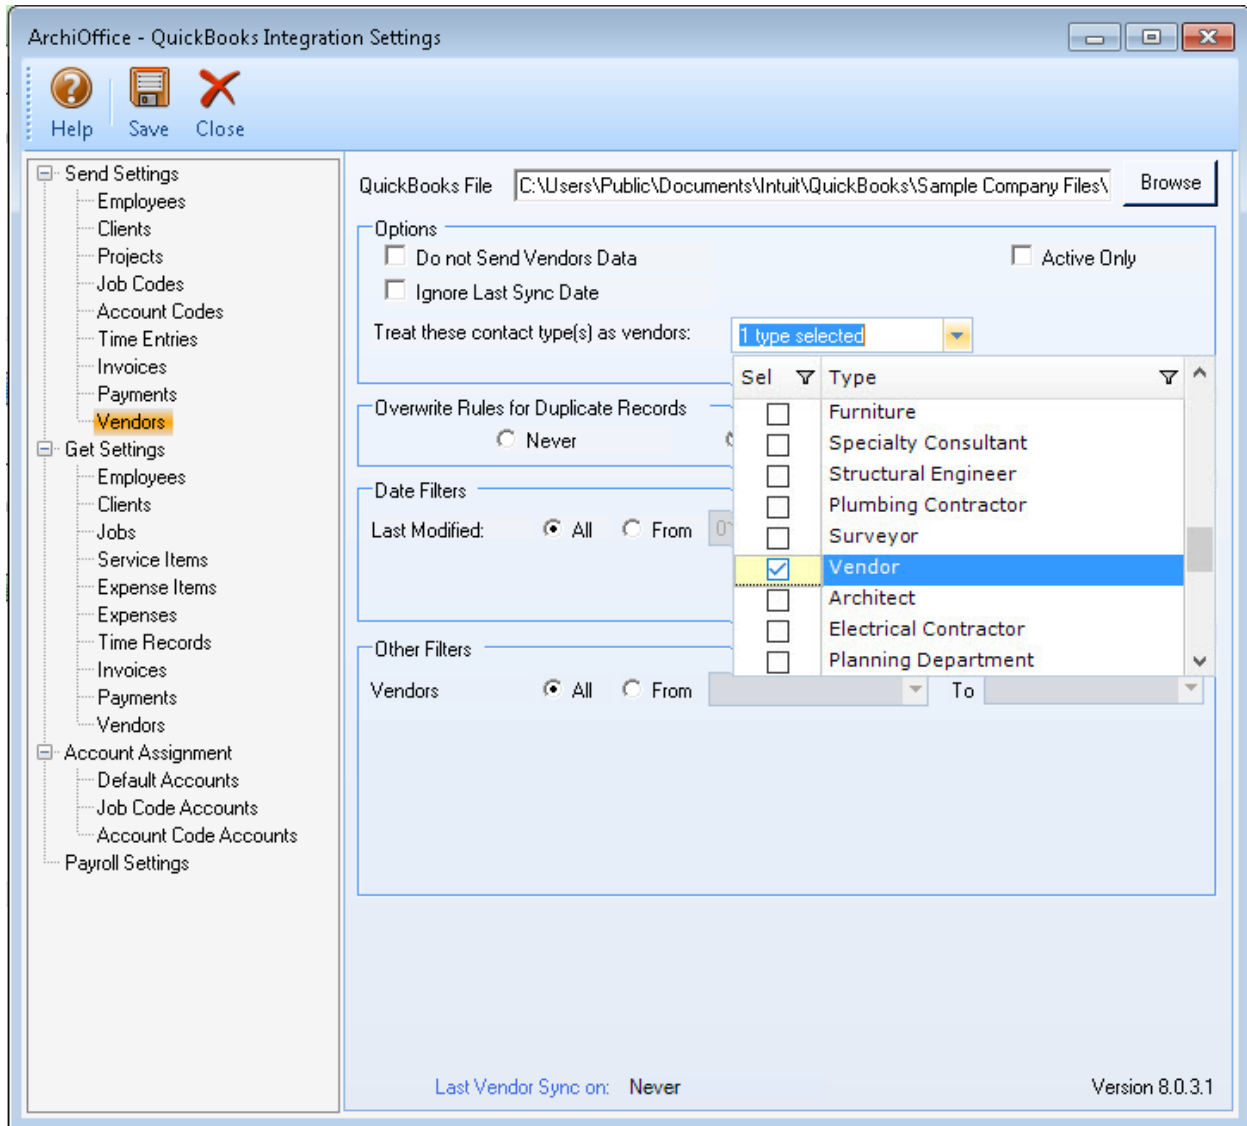

Send Settings

The send settings allow you to set rules for transferring data from ArchiOffice to QuickBooks database. You can also restrict the data sent from ArchiOffice to QuickBooks using filters (e.g., employees, job codes, etc.).

The Send options change depending upon the module selected from the list on the left of the screen.

You can specify various settings *per module* for sending data to QuickBooks. *For description of each field on this screen, see the [ArchiOffice Help](#).*

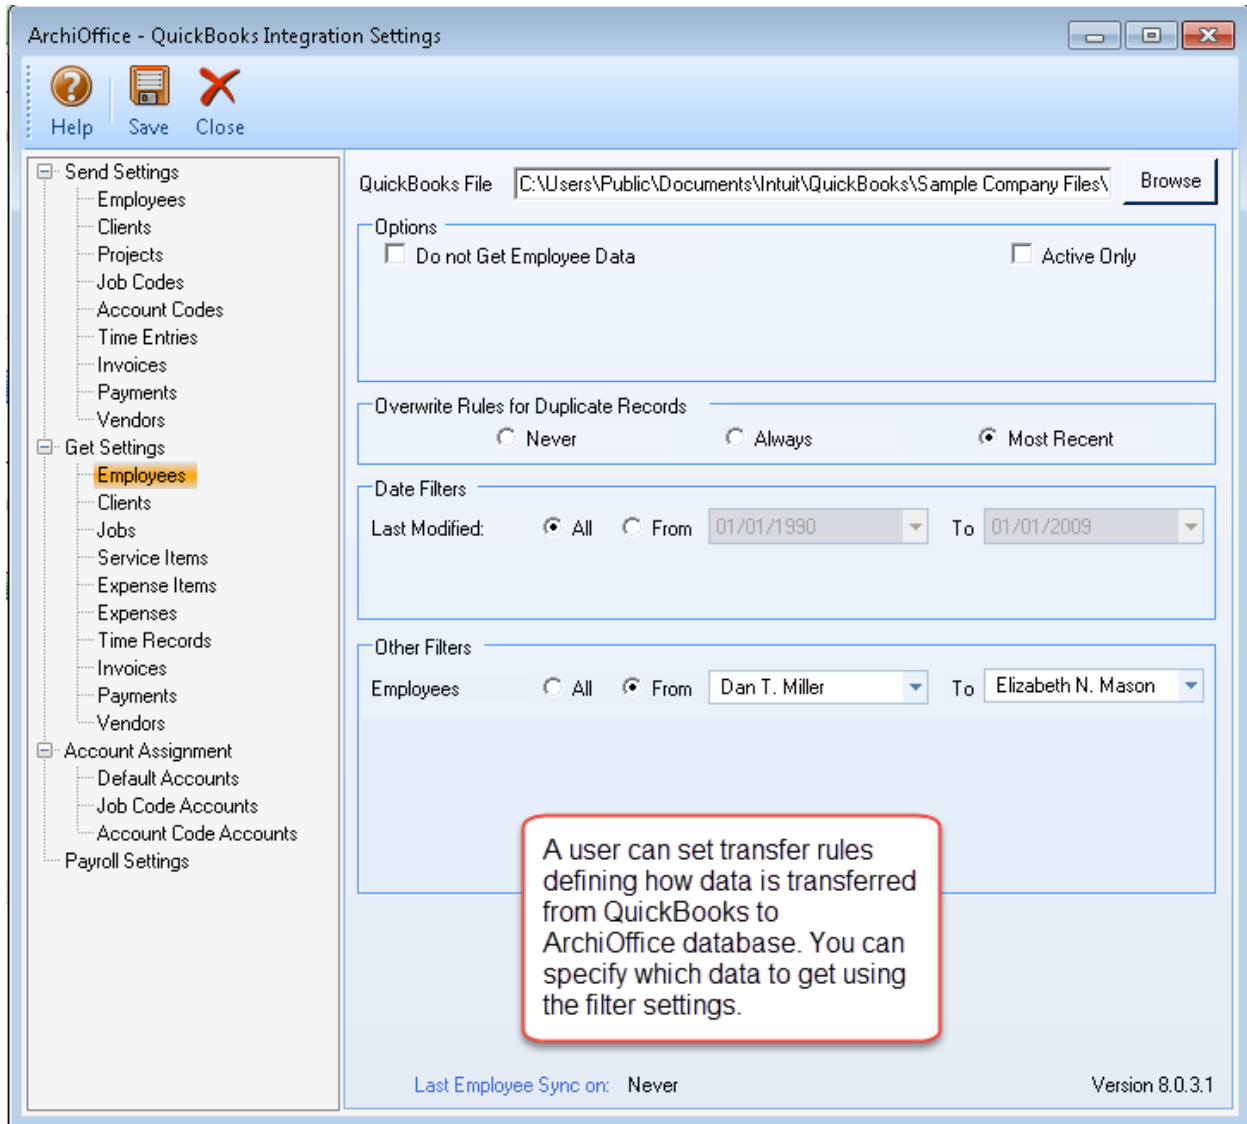

Get Settings

Get settings are used to set rules for transferring data from QuickBooks to ArchiOffice database. You can also restrict the data received from QuickBooks into ArchiOffice using filters.

The Get options change depending upon the module selected on the left of the screen.

You can specify the following settings per module for getting data from QuickBooks. For description of each field on this screen, see the [ArchiOffice Help](#).

Account Assignment

Job Codes (activities) in ArchiOffice are linked to Service Items in QuickBooks. Similarly, Account Codes (expense items) in ArchiOffice are linked to Other Charge Items in QuickBooks. A key step in the integration process is to assign general ledger (G/L) accounts to ArchiOffice codes and invoice items. In ArchiOffice, service and expense accounts are not required, except for the purpose of data integration with other accounting software that require G/L accounts for all items and transactions.

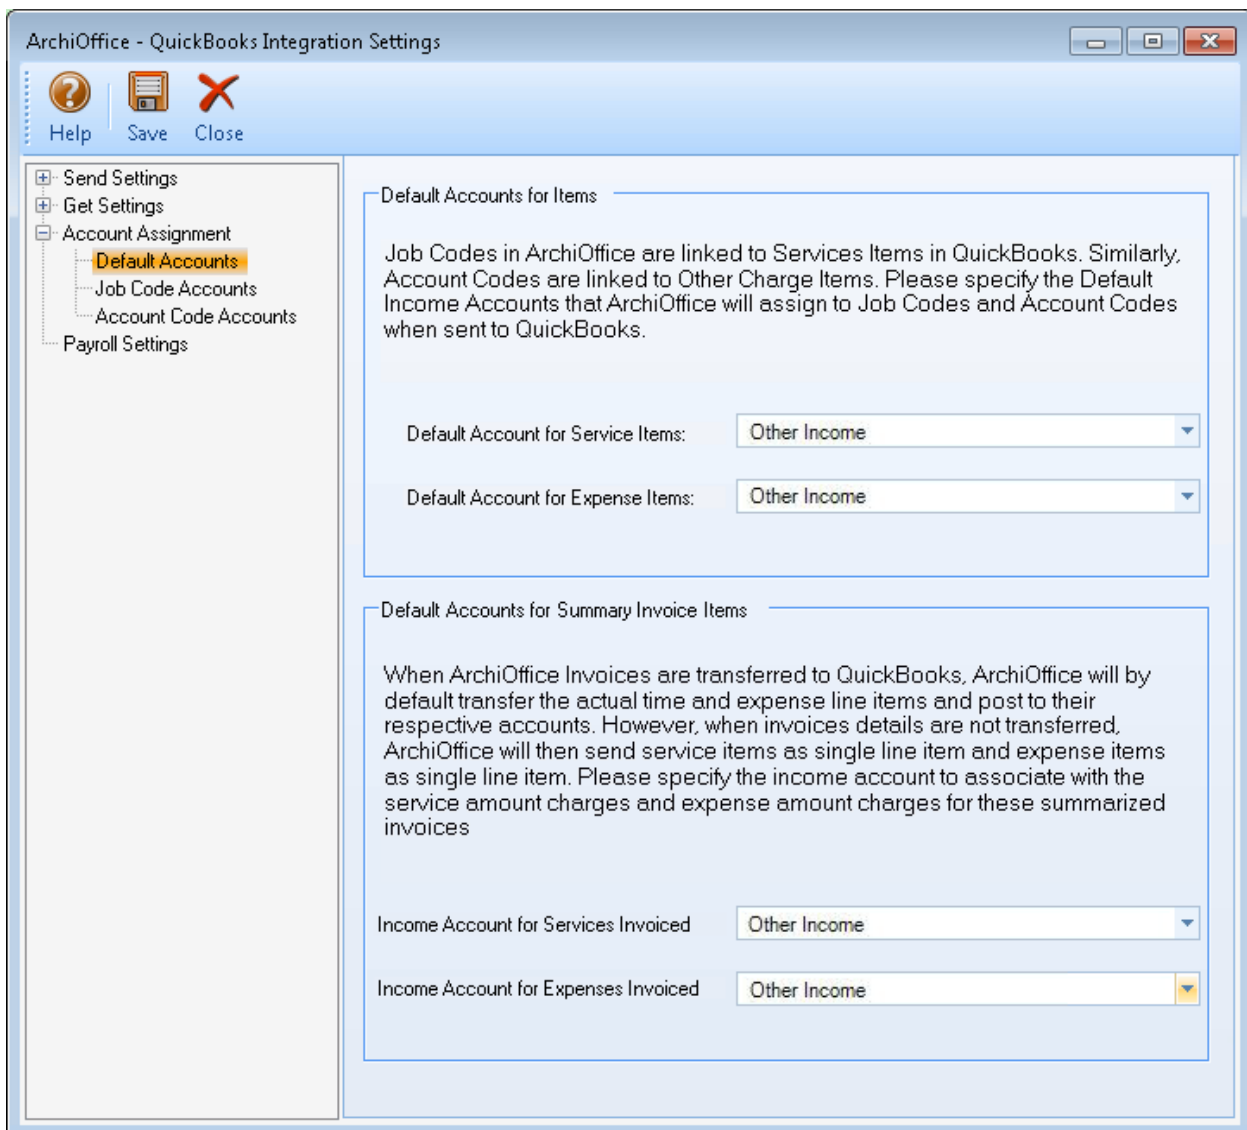

For companies that integrate ArchiOffice with QuickBooks, they need to specify default General Ledger accounts for the service, expense and invoice items in ArchiOffice (prior to the synchronization). When ArchiOffice invoices are transferred to QuickBooks, by default it transfers the actual time and expense line items and posts them to their respective accounts. However, when invoice details are not transferred,

ArchiOffice sends service and expense items as single line items. Normally, the transactions debit or credit these accounts. You can assign G/L accounts to job codes, account codes and invoice items on the ArchiOffice-QuickBooks Integration Settings screen.

QuickBooks accounts are available for assignment in ArchiOffice only after a connection has been established between the two programs.

If you integrate with QuickBooks and *GET* service and other charge items, the 0associated G/L accounts also carry to ArchiOffice. When a job code or expense is part of an invoice (associated time and expense entries are relieved with the invoice), and you synchronize that invoice with QuickBooks, the correct G/L account will be updated there. This tracks your company's income and expenses in the accounting system.

The screenshot shows the 'ArchiOffice - QuickBooks Integration Settings' window. The left sidebar contains a tree view with the following items: Send Settings, Get Settings, Account Assignment (expanded), Default Accounts (highlighted), Job Code Accounts, Account Code Accounts, and Payroll Settings. The main content area is divided into two sections:

Default Accounts for Items

Job Codes in ArchiOffice are linked to Services Items in QuickBooks. Similarly, Account Codes are linked to Other Charge Items. Please specify the Default Income Accounts that ArchiOffice will assign to Job Codes and Account Codes when sent to QuickBooks.

Default Account for Service Items:

Default Account for Expense Items:

Default Accounts for Summary Invoice Items

When ArchiOffice Invoices are transferred to QuickBooks, ArchiOffice will by default transfer the actual time and expense line items and post to their respective accounts. However, when invoices details are not transferred, ArchiOffice will then send service items as single line item and expense items as single line item. Please specify the income account to associate with the service amount charges and expense amount charges for these summarized invoices

Income Account for Services Invoiced:

Income Account for Expenses Invoiced:

Service and expense accounts can be set up in two ways:

- ArchiOffice Accounting Option: You can assign accounts to ArchiOffice job and account codes via the ArchiOffice-QuickBooks Integration Settings screen. QuickBooks income and expense accounts are available for assignment after a connection between ArchiOffice and QuickBooks is established.
- QuickBooks: If you integrate with QuickBooks and GET Service and Other Charge Items, the associated G/L accounts also transfer to ArchiOffice

Use the ArchiOffice-QuickBooks Integration Settings screen to specify the desired QuickBooks accounts for ArchiOffice items.

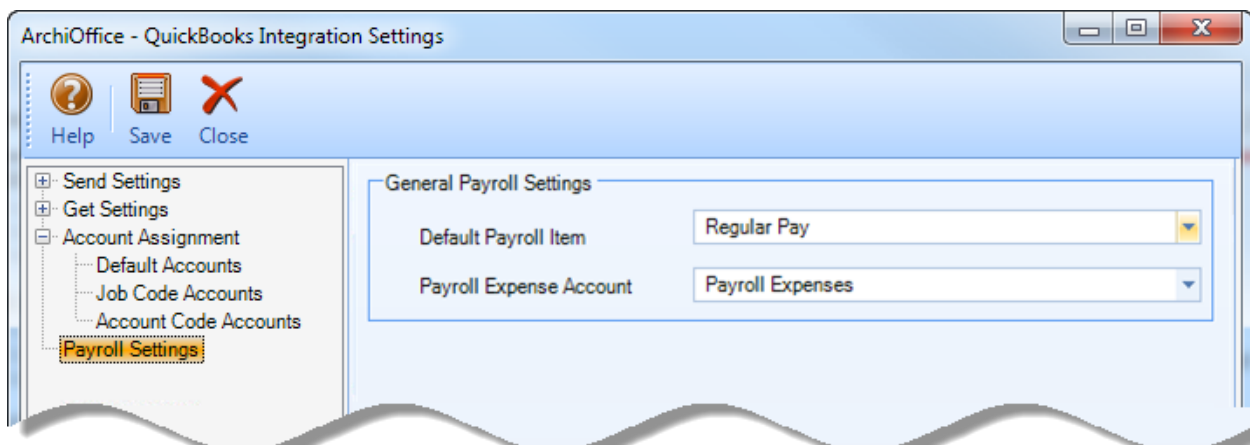

You can specify default accounts for ArchiOffice job codes (service items) and account codes (expense items). Besides these, you can also specify default accounts for summarized service and expense line items that are invoiced. *For description of each field on this screen, see the [ArchiOffice Help](#).*

See the [Initial Integration](#) section for step-by-step instructions.

Payroll Settings

Every payroll item must be assigned to an account in QuickBooks. ArchiOffice allows you to assign QuickBooks payroll items and accounts to its time entry related items such as regular time, overtime, vacation, etc. on an employee or employee group basis. The time data transferred will be assigned to the specified payroll item and account in QuickBooks. *For description of each field on this screen, see the [ArchiOffice Help](#).*

INITIAL INTEGRATION

The initial integration populates the ArchiOffice or QuickBooks company database with information from the other program. Your initial synchronization settings determine what information and how much of it is shared between the programs. For example, you can decide to move QuickBooks data for only the last two years to ArchiOffice.

Both ArchiOffice and QuickBooks must be running during the integration process. You will first specify the synchronization options on the ArchiOffice-QuickBooks Integration Settings screen for the initial integration set up and then use the Get or Send menus to transfer each data type (e.g., Employee, vendor, etc.). You can do this by referring to one of the scenarios covered in this section that best fits your needs.

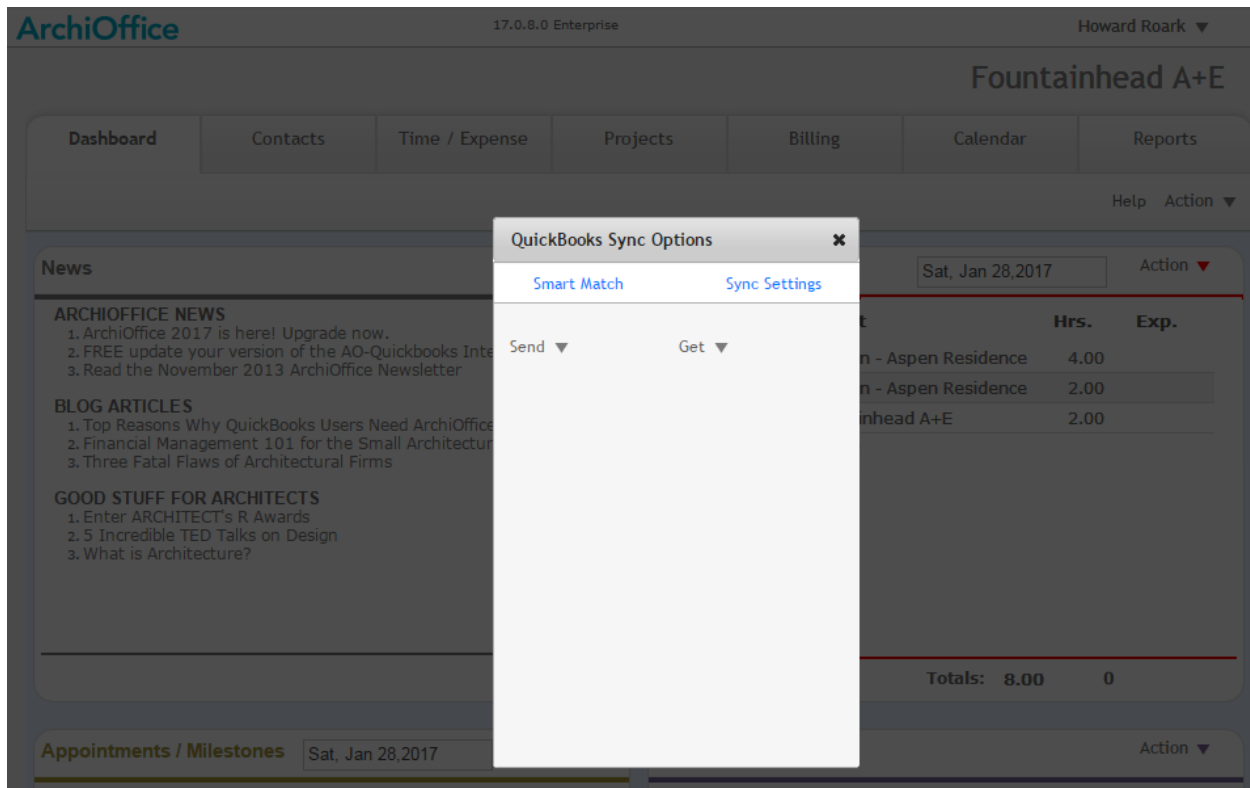

If you are new to ArchiOffice as well as QuickBooks, initial integration tasks will be completed after you have set up your information in both programs.

Security Permissions

Before you synchronize ArchiOffice data with QuickBooks, you must have security permission to perform the task. The Administrator in your company sets the QuickBooks Sync option in the ArchiOffice Preferences screen. An easy way to avoid warning messages is to add ArchiOffice and QuickBooks to your Windows Startup folder so they run automatically at startup.

You also need to assign auto logon permission to ArchiOffice from QuickBooks. To allow direct communication, you have to grant permission to ArchiOffice to access your QuickBooks database.

1. Open QuickBooks and log in as an administrative user. Open the desired company file.
2. Click your user name at the top-right of the ArchiOffice screen and select Accounting from the drop-down list.
3. Choose Sync Settings.

4. You will be prompted to grant access to ArchiOffice. Choose the *Yes, always; allow access...* option and select the *Allow this application to access to personal data...* check box.
5. Click Continue.

6. Confirm your selection by clicking Done. This establishes the first connection between the two programs.
7. A confirmation to back up your QuickBooks data before settings ArchiOffice-QuickBooks Integration settings displays. Select Yes or No to continue. After you make your choice the ArchiOffice - QuickBooks Integration Settings window displays.

If you don't see the dialog box, look for the ArchiOffice icon on your windows toolbar and click it.

Scenario 1: New ArchiOffice-Existing QuickBooks User

QuickBooks users who are new to ArchiOffice should start by transferring information from QuickBooks to a new ArchiOffice database. After creating the ArchiOffice company file and setting preferences, you can initiate synchronization and check the transferred data.

You can contact us at support@ArchiOffice.com to help you with the data integration process. Check out ArchiOffice Training for a standard or custom training course on data integration with QuickBooks. BQE Software also offers Consulting Services in these areas.

Follow the steps below to integrate ArchiOffice and QuickBooks data.

Step 1: Set Up ArchiOffice Company

In this step, you must first set up a company in ArchiOffice and enable the integration feature.

1. Before integrating data, you must first set up an ArchiOffice company database. See [ArchiOffice Help](#) or [ArchiOffice Getting Started Guide](#) for more information.
2. Download and install the ArchiOffice↔QuickBooks Integration Tool from <http://www.bqe.com/products/archioffice/downloads>
3. Start ArchiOffice and log in as an administrator.
4. Click your user name at the top of the ArchiOffice screen and select Preferences. Select Billing and then Integration on the left of the Preferences screen and choose the QuickBooks Sync option.

Step 2: Backup QuickBooks Database

Back up your QuickBooks database before the initial synchronization. In QuickBooks, select Create Backup from the File menu and then choose a backup option.

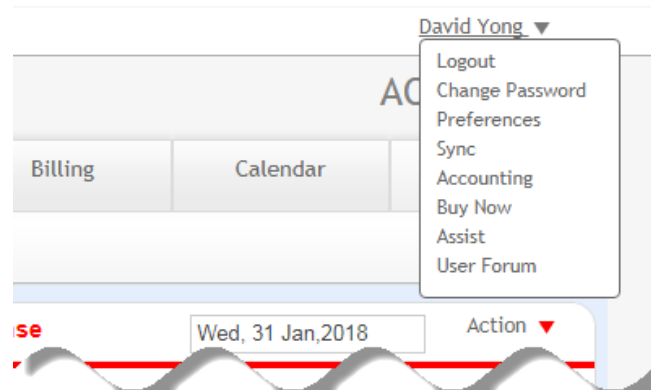

If you haven't already done so, you need to assign permissions to ArchiOffice to access QuickBooks data (see [Security Permissions](#) above).

Step 3: Configure ArchiOffice Synchronization Settings

Specifying integration settings is necessary to define what data is transferred as well as other preferences. You can later fine-tune these settings to control day-to-day integration processing (*see 5. Fine-Tune Synchronization Settings below*).

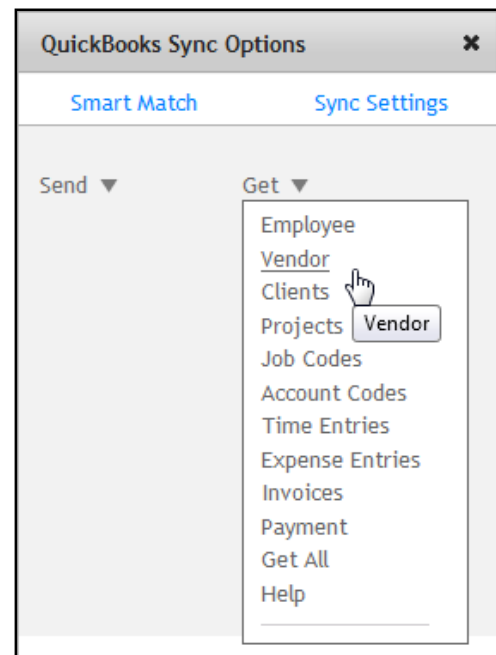

1. In ArchiOffice, click your user name at the top of the ArchiOffice screen and select Accounting from the drop-down list.

2. Click Sync Setting. The ArchiOffice-QuickBooks Integration Settings screen displays.

 See the [Integration Settings](#) section for more information.

3. On the left of the screen is a list of ArchiOffice modules, both for Send Settings and Get Settings. You can specify various filters and other synchronization options based on the module selected.

Since you want to transfer data from QuickBooks to ArchiOffice, configure settings for the modules (e.g., employees, clients, etc.) in the Get Settings list containing data to be transferred (See [Get Settings](#) for more.).

 You only need to decide whether to get each type of QuickBooks data to ArchiOffice. If you want to restrict what data records transfer from QuickBooks, choose one or more filters.

 We recommend that you do not get time or expense entries from QuickBooks which are already accounted for on an invoice. Use the Date filters in the ArchiOffice-QuickBooks Integration tool to only retrieve time and expense entries that have not been invoiced yet using.

4. Click Save to save the synchronization settings and then close it.

Step 4: Get Data from QuickBooks

Now you are ready to transfer data from QuickBooks to ArchiOffice.

1. Click your user name at the top of the ArchiOffice screen and select Accounting from the drop-down list.
2. Click the Get drop-down list on the QuickBooks Sync Options screen.
3. Select each listed item, starting with Employees.
4. After the progress bar indicates the transfer is complete, open the corresponding screens in ArchiOffice and QuickBooks, and verify whether the data is complete. See [Quick-Check](#) for more information.
5. Repeat steps 3 and 4 for each displayed item, in the order listed. Below are the ArchiOffice Get menu items and the corresponding QuickBooks screen.

It is *highly recommended* that you import items in the order they are listed on the drop-down list.

ArchiOffice Get Menu Item	QuickBooks Screen
Employees	Employees
Vendors	Vendors
Clients	Customers
Projects	Jobs
Job Codes	Service Items
Account Codes	Other Charge
Time Entries	Time Tracking
Expense Entries	Bills and Checks
Invoices	Invoices
Payments	Payments

Step 5: Verify Data Transfer and Refine Synchronization Settings

Data adjustments are needed in ArchiOffice after getting data from QuickBooks because ArchiOffice requires certain fields which might be optional in QuickBooks.

- **Employees:** When you get employees from QuickBooks, make sure to check their user and security settings in ArchiOffice.
- **Time Entries:** When you get time entries from QuickBooks, make sure to update the bill and cost rates in ArchiOffice because QuickBooks doesn't require them.

- **Alternate Contact:** Alt. Contact in QuickBooks corresponds to ArchiOffice's Project Leader. If Alternate Contact is not specified in QuickBooks, ArchiOffice fills a placeholder 'FromQuickBooks' in the Project Leader field. Change that to the appropriate names.
- **Names:** Check the names of records (e.g., contacts or projects) transferred from QuickBooks. You can change them, if desired.
- **Data Accuracy:** Verify other data using reports in ArchiOffice and QuickBooks.

After you check the data transferred to ArchiOffice, you can change your integration settings to ones better suited to day-to-day synchronization. See [Day-to-Day Integration Scenarios](#) for more.

Scenario 2: Existing ArchiOffice-New QuickBooks User

ArchiOffice users who are new to QuickBooks must first transfer information from ArchiOffice to a new QuickBooks database. After creating the QuickBooks file and setting synchronization preferences, you can initiate synchronization and check the transferred data.

You can contact us at support@ArchiOffice.com to help you with the data integration process. Check out [ArchiOffice Training](#) for a standard or custom training course on data integration with QuickBooks. BOE Software also offers [Consulting Services](#) in these areas.

Please follow the steps below to integrate ArchiOffice and QuickBooks data.

Step 1: Create a QuickBooks Company Database

Before integrating data with ArchiOffice, create a new QuickBooks company database and assign permissions to ArchiOffice to access its data (see [Security Permissions](#) above).

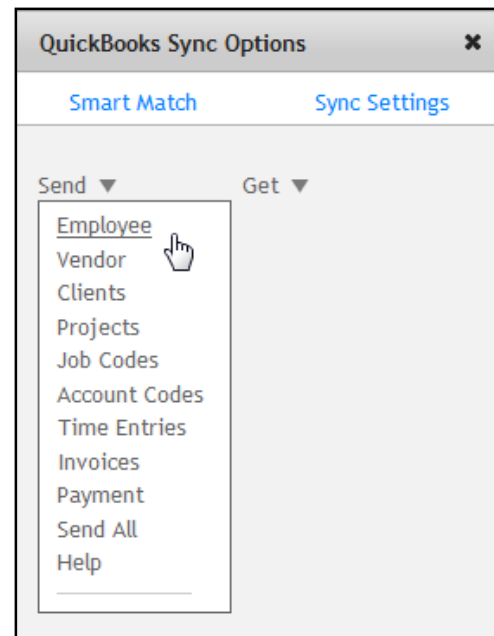

Step 2: Configure ArchiOffice Synchronization Settings

Specifying synchronization settings is necessary to determine what data will be transferred as well as other preferences. Later, you can fine-tune these settings to control day-to-day integration process (see [5. Fine-Tune Synchronization Settings](#) below).

1. Download and install the [ArchiOffice↔QuickBooks Integration Tool](#).
2. Log in to ArchiOffice as an Administrative user.
3. Click your user name at the top of the ArchiOffice screen and select Preferences. Select Billing and then Integration on the left of the Preferences screen and select the QuickBooks Sync check box.
4. Select Accounting from the Master Action drop-down list.

- Click Sync Settings on the QuickBooks Sync Options screen.
- On the left of the screen is a list of ArchiOffice modules (e.g., employees and jobs) for both Send Settings and Get Settings. You can set various filters and other synchronization options for each module.

Since you want to transfer data from ArchiOffice to QuickBooks, configure the modules in the Send Settings list. See [Send Settings](#) for more.

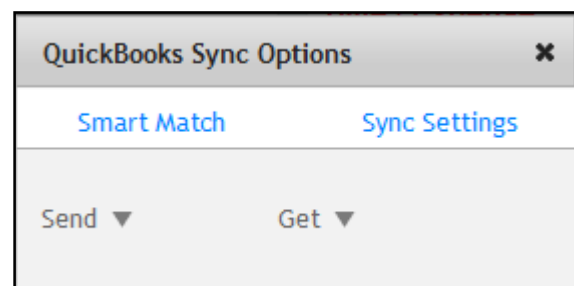

You only need to decide whether to send each type of ArchiOffice data to QuickBooks. If you want to restrict what data records transfer to QuickBooks, choose one or more filters.

- Click on Account Assignment and select the default accounts for ArchiOffice items prior to data transfer. See [Account Assignment](#) for more.
- Click Save and then Close.

Step 3: Send ArchiOffice Data

Now you are ready to send data from ArchiOffice to QuickBooks.

- Click your user name at the top of the ArchiOffice screen and click Accounting.
- Click the Send drop-down list on the QuickBooks Sync Options screen.
- Select each listed item, starting with Employees.
- After the progress bar indicates the transfer is complete, open the corresponding screens in ArchiOffice and QuickBooks, and verify whether the data is complete. See Quick-Check for more information.

Repeat steps 3 and 4 for each displayed item, in the order listed. Below are the ArchiOffice Send menu items and the corresponding QuickBooks screens.

ArchiOffice Send Menu Item	QuickBooks Screen
Employees	Employees
Vendors	Vendors
Clients	Customers
Projects	Jobs
Job Codes	Service Items
Account Codes	Other Charge
Time Entries	Time Tracking
Invoices	Invoices
Payments	Payments

We *highly recommend* that you import items in the order they are listed on the drop-down list.

Step 4: Verify Data and Refine Synchronization Settings

In this stage, you should check the data transferred to QuickBooks and verify its accuracy. In addition, you can change your integration settings to ones better suited for day-to-day synchronization. See [Day-to-Day Integration Scenarios](#) for more.

Scenario 3: Existing ArchiOffice-Existing QuickBooks User

Typically, a company uses ArchiOffice to manage projects, enter time, generate invoices, record payments, and produce reports. QuickBooks is used for accounting tasks such as payroll, accounts payable, financial reports and so on. If you have been using both ArchiOffice and QuickBooks, and want the two programs to be able to share data, data integration between the two needs a proper plan.

In case of existing ArchiOffice and QuickBooks users, it is likely that duplicate records exist in the other program. This duplication occurs because of separate entry of data in the two programs, even for similar records. The matching of these records can be a time consuming process. However, this needs to be done only once and then from that point onwards, data syncing can be scheduled accordingly.

You have three options:

1. If you have created a set of clients, projects (jobs), employees, invoices and payments in both databases, you should move the records from ArchiOffice to QuickBooks first. If you move this data from ArchiOffice to QuickBooks and some of these records already exist in QuickBooks, we recommend that you merge the duplicates. This merging of the records can be a time consuming process. ArchiOffice provides a separate ArchiOffice-QuickBooks Smart Match tool. You will need to run it only once and then from that point onwards, data can be synchronized automatically. You

can even select the modules for matching data.

See the [ArchiOffice Help](#) for details on the Smart Match tool.

2. Create a new database in one of the two programs—ArchiOffice or QuickBooks. And follow the relevant scenario:
 - [Existing ArchiOffice-New QuickBooks User](#)
 - [New ArchiOffice-Existing QuickBooks User](#)
3. If you do not want to create a new database in any of the two programs and want to maintain your existing data in both databases, use our BQE Consulting Services. For a nominal fee, we can sync the data between your existing databases and match or merge the duplicate records for **you**.

You can contact us at support@ArchiOffice.com to help you with the data integration process. Check out ArchiOffice Training for a standard or custom training course on data integration with QuickBooks.

Scenario 4: New ArchiOffice-New QuickBooks User

If you are new to both ArchiOffice and QuickBooks, you need to set up databases in both programs for your company, enter or import master information in ArchiOffice (or QuickBooks), and then synchronize the data. The instructions below cover these tasks.

You can contact us at support@ArchiOffice.com to help you with the data integration process. Check out [ArchiOffice Training](#) for a standard or custom training course on data integration with QuickBooks. BQE Software also offers [Consulting Services](#) in these areas.

To get complete and useful practice management information from the start and to reduce setup time, we recommend that you add or create master information and other time and billing data in your ArchiOffice database. The exception to this would be the job codes and account codes (service and expense items), which should be created in QuickBooks and then transferred to ArchiOffice. Once databases are set up, you can sync data between ArchiOffice and QuickBooks.

Step 1: Configure Your ArchiOffice Company Database

This step covers instructions for setting up a new ArchiOffice database for integration with QuickBooks.

1. You need to set up an ArchiOffice company database. See [ArchiOffice Help](#) or [ArchiOffice Getting Started Guide](#) for more information.
2. Install the [ArchiOffice↔QuickBooks Integration Tool](#).

3. Start ArchiOffice and log in as an administrator.
4. Click your user name at the top of the ArchiOffice screen and select Preferences from the drop-down list.
5. Open the Billing folder and click Integration. Select the QuickBooks Sync check box.

Step 2: Create a QuickBooks Database

Next you must create a QuickBooks database and assign permission to ArchiOffice to access its data (*see [Security Permissions](#) for more*).

Step 3: Preparing Data for Integration

You can set up your data manually, import it, or use a combination of both methods. The sequence for an efficient set up is as follows:

1. Master information should be set up first in ArchiOffice. This includes Contacts (employees, clients and vendors), Projects, Job Codes, etc. Other information can be added later.

When setting up new records, you only need to enter data into a few required fields. Other data can be entered now or later.

ArchiOffice Setup Sequence	ArchiOffice Screen
Employees	Contacts
Vendors	Contacts
Job Codes	Preferences
Account Codes	Preferences
Clients	Contacts
Projects	Projects
Time Entries	Time/Expense
Expense Entries	Time/Expense
Invoices	Billing
Payments	Billing

The exception to this would be the job and account codes (that is, service and expense items), which should be created in QuickBooks and then transferred to ArchiOffice.

2. Create or add project records in ArchiOffice. Phases and sub-phases can be created to break down work being done for a client.

Each project record contains contacts, milestones, billing options, budget and other elements that control how ArchiOffice adapts to your company and processes data. When billing, ArchiOffice automatically organizes information by project, making it easier and faster to bill clients.

Architects and engineers often break down projects into phases, assigning a portion of the contract amount or budget to a phase of work.

3. Create a chart of accounts in QuickBooks to describe and monitor the financial activity of your business. You can create these accounts from scratch or use the standard chart of accounts.
4. Determine what time (e.g., timesheets or time entries) and expenses (e.g., expense reports) in your old time and billing program are unbilled. Manually enter or import these records into ArchiOffice. To manually enter time and expense records, use ArchiOffice Time/Expense screen.
5. When recording historical or old invoices, you have several options:
 - You can enter summarized historical invoices in QuickBooks and then transfer them to ArchiOffice.
 - You can enter summarized historical invoices in ArchiOffice and then transfer them to QuickBooks. This is the recommended option for an easy set up.

In any case, we recommend entering summarized time and expense entries for accurate reporting, job costing and profitability.

6. If you entered any paid invoices, you need to record the associated payment (cash receipt) to bring it to the Paid status in ArchiOffice. Record payments or retainers for invoices via the Transactions Details screen, accessed by going to the Project > Billing > Transaction screen and double-clicking a listed invoice. See the ArchiOffice Help for more information.

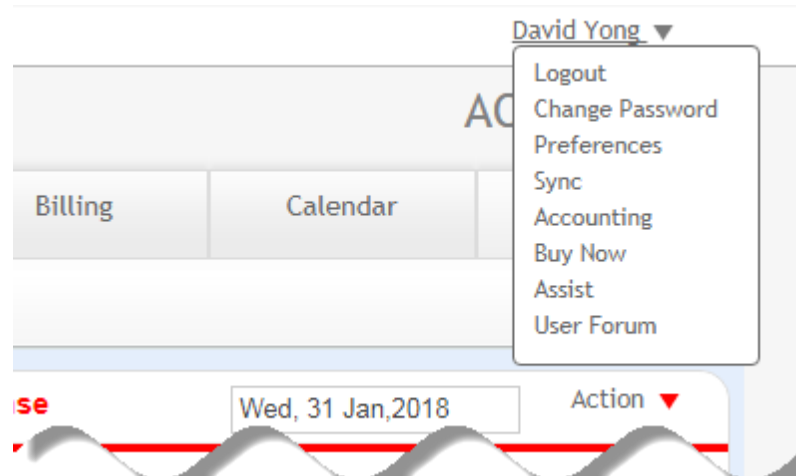

If you entered only outstanding invoices or balance forward amounts, you can move to the next step.

Step 4: Configure Synchronization Settings

After data has been set up in the respective programs, you need to sync it. You can start by transferring service and expense items data in QuickBooks into ArchiOffice. As the rest of the data is in ArchiOffice, you will have to transfer that to QuickBooks so that both programs begin processing from the same point

onwards. Specifying synchronization settings is necessary to define which data will be transferred as well as other preferences. Later, you can fine-tune these settings to control day-to-day integration (*see 9. Fine-Tune Synchronization Settings below*).

1. In ArchiOffice, click your user name at the top of the ArchiOffice screen and select Accounting from the Action drop-down list.

2. On the Sync Options screen, click Sync Settings. The ArchiOffice-QuickBooks Integration Settings screen displays.

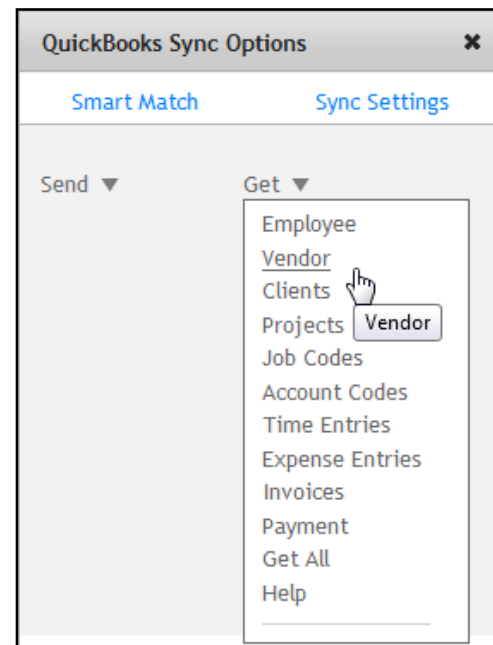

See the [Integration Settings](#) section for more information.

3. On the left of the screen is a list of ArchiOffice modules for both Send Settings and Get Settings. You can specify various filters and other synchronization options for each module.

First, you want to transfer service and expense items data from QuickBooks to ArchiOffice. Ensure that these modules are selected from the Get Settings list. *See [Get Settings in the Integration Settings section for more](#).*

4. Click the Save button to save the synchronization settings and then Close.

Step 5: Get Data from QuickBooks

Now you are ready to transfer data from QuickBooks to ArchiOffice.

1. Click your user name at the top of the ArchiOffice screen and select Accounting from the drop-down list.

2. Select Get on the QuickBooks Sync Options screen.
3. Select each listed item, starting with Job Codes.
4. After the progress bar indicates the transfer is complete, open the corresponding screens in ArchiOffice and QuickBooks, and verify whether the data is complete. See [Quick-Check](#) for more information.
5. Repeat steps 3 and 4 for each displayed item, in the order listed.

Step 6: Fine-Tune Synchronization Settings

A data accuracy check is needed in ArchiOffice after retrieving data from QuickBooks because ArchiOffice requires certain fields, which might be optional in QuickBooks.

- **Employees:** When you get employees from QuickBooks, make sure to check their user and security settings in ArchiOffice.
- **Time Entries:** When you get time entries from QuickBooks, make sure to update the bill and cost rates in ArchiOffice because QuickBooks does not require them.
- **Alternate Contacts:** Alt. Contact in QuickBooks corresponds to ArchiOffice Project Leader. If Alternate Contact is not specified in QuickBooks, ArchiOffice fills a placeholder 'FromQuickBooks' in the Project Leader field. Change that to the appropriate names.
- **Record Names:** Check the names of records (e.g., contacts or projects) transferred from QuickBooks. You can change them, if desired.
- **Reports:** Verify other data using reports in ArchiOffice and QuickBooks.

After you check the data transferred to ArchiOffice, you can change your integration settings to ones better suited to day-to-day synchronization. See [Day-to-Day Integration Scenarios](#) for more.

Step 7: Configure Send Settings

Since your next step is to transfer the rest of the data from ArchiOffice to QuickBooks, you have to specify Send Settings in the ArchiOffice-QuickBooks Integration Settings screen. You also need to specify accounts for ArchiOffice items prior to the synchronization. See the [Integration Settings](#) section for more information.

1. Again, open the ArchiOffice-QuickBooks Integration Settings screen.

Since you want to transfer data from ArchiOffice to QuickBooks, select and configure modules in the Send Settings list. See [Send Settings](#) for more information.

You only need to decide whether to send each type of ArchiOffice data to QuickBooks. If you want to

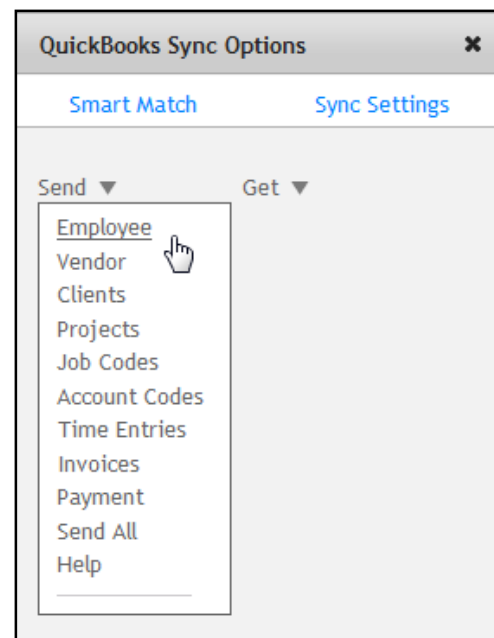

restrict what data records transfer to QuickBooks, choose one or more filters.

2. Expand the Account Assignment list and select default accounts for ArchiOffice items. See [Account Assignment](#) for more information.
3. Click Save to save all the synchronization settings and then Close.

Step 8: Send Data to QuickBooks

Now you are ready to synchronize data with QuickBooks.

1. Click your user name at the top of the ArchiOffice screen and select Accounting.
2. On the QuickBooks Sync Options screen, click Send.
3. Select each listed item, starting with Employees.
4. After the progress bar indicates the transfer is complete, open the corresponding screens in ArchiOffice and QuickBooks, and verify whether the data is complete. See Quick-Check for more information.
5. Repeat steps 3 and 4 for each displayed item, in the order listed. Below are the ArchiOffice Send menu items and the corresponding QuickBooks screen.

ArchiOffice Send Menu Item	QuickBooks Screen
Employees	Employees
Vendors	Vendors
Clients	Customers
Projects	Jobs
Job Codes	Service Items
Account Codes	Other Charge
Time Entries	Time Tracking
Invoices	Invoices
Payments	Payments

Step 9: Fine-Tune Synchronization Settings

After you check the data transferred to QuickBooks, you can customize or adjust your integration options to settings appropriate for daily synchronization. See [Day-to-Day Integration Scenarios](#) for more.

QUICK-CHECK

A standard procedure after initial synchronization of data between ArchiOffice and QuickBooks is to check the transferred data. This ensures that your information is accurate and complete before you begin normal processing.

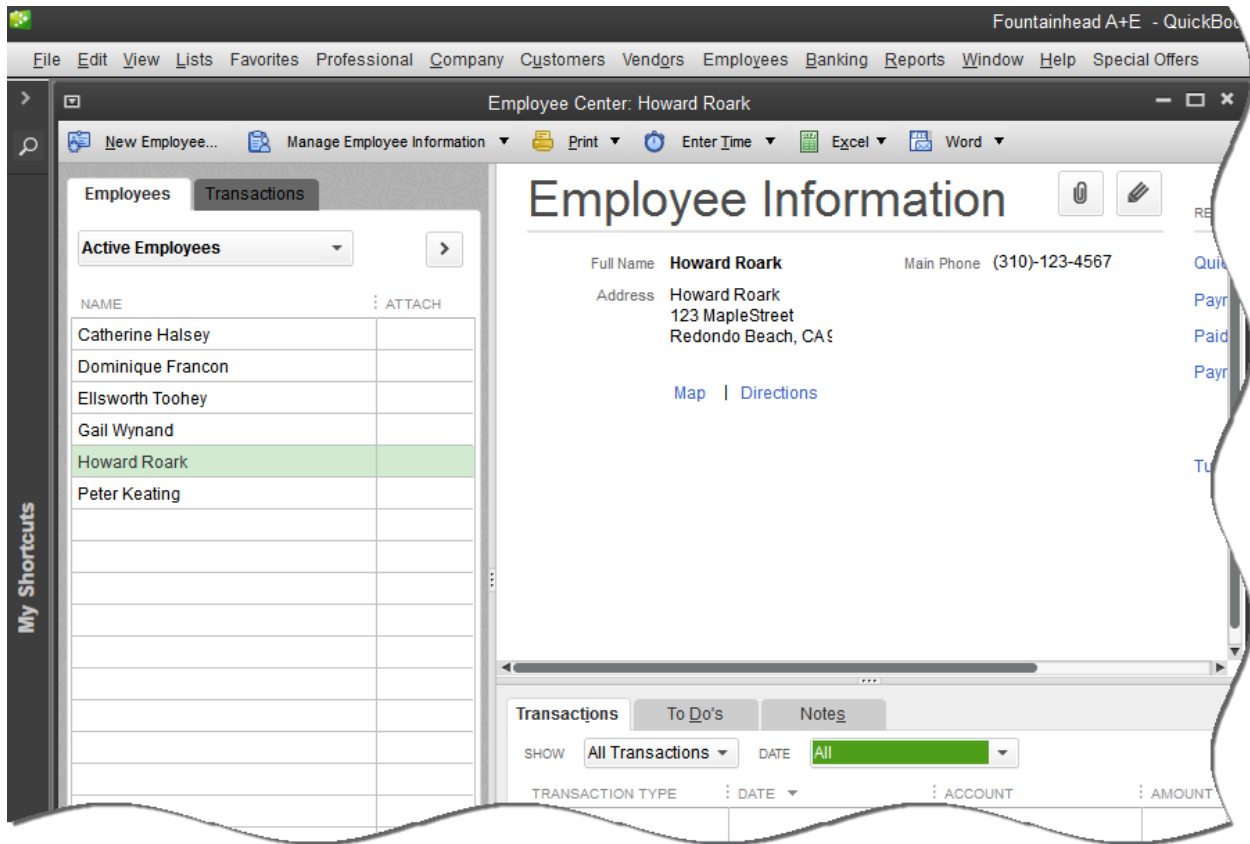

ArchiOffice contains multiple processes to ensure accurate and complete data transfer. However, a setting in QuickBooks might have restricted the transfer of some data. Or, you might have inadvertently checked filters on the ArchiOffice-QuickBooks Integration Settings screen. Checking data before you begin normal processing ensures no surprises later.

After completing synchronization of your data, you can do a Detailed or Summary data check. A Detailed check involves comparing data on ArchiOffice and QuickBooks screens side-by-side. A Summary check involves comparing ArchiOffice and QuickBooks generated reports.

For example, after syncing data, you would use the following steps to check employee data:

Detailed Check

1. In QuickBooks, open the Employee Center from the Employees menu or the toolbar.
2. In ArchiOffice, select Contacts from the navigation bar.

3. In the List of Contacts, look for records with *Employee* in the Type column.
4. Switch between the programs, selecting the same employee in both screens and verify the data is same.

Summary Check

Both ArchiOffice and QuickBooks contain reports that can help you verify the transfer of information between the two programs.

1. In QuickBooks, open the Employee Contact List report from the Report Center (Reports menu).
2. In ArchiOffice, open Employee Address Book report from the Reports screen.

The screenshot shows the ArchiOffice Report Center interface. The 'Employee' report is selected in the left-hand navigation menu. Three report thumbnails are visible: 'Employee Contact List', 'Employee Withholding', and 'Paid Time Off List'. A pop-up window titled 'Employee Contact List' is open, displaying a table of employee information for 'Fountainhead A+E'.

Employee	SS No.	Main Phone	Address	Gender
Catherine Halsey				
Dominique Francon		(310)-602-4010	2601 Airport Drive Suite 380 Torrance, CA 90505	
Elisworth Toohey				
Gail Wynand				
Howard Roark		(310)-123-4567	123 MapleStreet Redondo Beach, CA 90277	
Peter Keating		(310)-222-3344	2601 Airport Drive Suite 380 Torrance, CA 90505	

Fountainhead A+E

Employee Address Book

Name	Location	Address	Phone	Ext	Email
Francon, Dominique	Work	2601 Airport Drive Suite 380 Torrance CA 90505	310 6024010		df@fountainheadbqe.com
	Home	505 N. Lucia Avenue Unit B Redondo Beach CA 90277			
Halsey, Catherine	Work	2601 Airport Drive Suite 380 Torrance CA 90505

	Home				

3. Preview and compare both reports to verify the employee data.

Post Synchronization Data Check and Comparison Checklist

Use the following checklist to ensure data integrity after synchronizing data between QuickBooks and ArchiOffice. The table details the ArchiOffice and QuickBooks screens and reports to compare to make sure your data is correct.

Module	Detail Check	Summary Check
Employees	Compare the QuickBooks Employee Center with the ArchiOffice Contacts List	Compare the QuickBooks Employee Contact List with the Employee Address Book in ArchiOffice
Check Clients, Projects, Service and Expense Items	Open the respective screens in ArchiOffice and QuickBooks, and check the data in both programs.	Open the relevant reports in ArchiOffice and QuickBooks.
Check Time Entries	Select Enter Time (Use Weekly Timesheet) from the Employees or Customers menu in QuickBooks and open the Time/Expense > Time screen in ArchiOffice. Check the data in both programs.	Open the time reports in ArchiOffice and QuickBooks.
Check Expense Entries	Select Enter Bills from the Vendors menu in QuickBooks and open the Time/Expense > Expenses screen in ArchiOffice.	Open the expense reports in ArchiOffice and QuickBooks.
Check Invoices	Select Create Invoices from the Customers menu in QuickBooks and open the Billing screen in ArchiOffice.	Open the billing or receivables reports in ArchiOffice and QuickBooks.
Check Payments	Select Receive Payments from the Customers menu in QuickBooks and open the Billing screen in ArchiOffice.	Open the payment reports in ArchiOffice and QuickBooks.

DAY-TO-DAY INTEGRATION SETTINGS

After completing the initial synchronization, you need to review the current settings to determine if they should be fine-tuned for day-to-day integration.

It is a good practice to maintain clients, projects, time entries, billing, accounts receivables, payments, and reports in ArchiOffice. QuickBooks should be used for functions such as accounts payable, general ledger, banking, payroll, and financial statements.

Below are situations to consider for each type of information and also the best practices followed in the industry.

Please check the [Integration Rules](#) for underlying rules and details about ArchiOffice↔QuickBooks Integration.

Master Information

Consider where you want to save each type of master information – service items, expense items, employees, clients, and projects. When you add, edit or delete records, do you want this task done in ArchiOffice, QuickBooks, or both?

Commonly, companies maintain project records in ArchiOffice only. This core information is essential to effective practice management and maintaining it in ArchiOffice is appropriate. Hence, it is better to create and maintain that data in ArchiOffice and send it to QuickBooks. To enforce this policy, you should accordingly turn on sending this data from ArchiOffice. This can be done in the ArchiOffice↔QuickBooks Integration Settings screen by selecting the desired module (Projects) and un-checking the Do not Send option.

However, it is a good practice to create service and expense items in QuickBooks because appropriate general ledger accounts are assigned to them there. It is better to transfer these items into ArchiOffice along with their G/L accounts. To enforce this policy, you should accordingly turn on getting this data from QuickBooks. This can be done in the ArchiOffice↔QuickBooks Integration Settings screen by selecting the desired module and un-checking the 'Do not Get' option.

Where you maintain client records depends on your situation.

Situation	Synchronization Setting	Action
Require extensive customer information (e.g., sales and payment defaults)	From Send Settings list, select Client and check the 'Do not Send' box.	Maintain customer records in QuickBooks. Get updated records from QuickBooks as needed.
Require typical customer information	From the Get Settings list, select Client and check the 'Do not Get' box	Maintain client records in ArchiOffice. Send updated records to QuickBooks as needed.
Desire convenience of update data common to ArchiOffice and QuickBooks, or want to enter data in either system	From the Send Settings and Get Settings list, select Client and make sure both 'Do not...' boxes are <i>unchecked</i> .	Synchronize as needed.

Decisions about employees follow a similar process.

Time Entries

You can record all time entries in ArchiOffice and then send them to QuickBooks via integration. Whether you transfer time records from QuickBooks or not, time entries from employees should be entered in ArchiOffice. It is designed for maximum data entry efficiency. ArchiOffice also includes numerous time and expense reports.

If an employee logs more than 24 hours in one day (e.g., entering historical entries) in ArchiOffice, QuickBooks will not accept this and the time will not sync.

If you do payroll through QuickBooks, you would send time records to QuickBooks. Make sure the *Do not Send* box for Time Entry is *unchecked* for Send Settings option in ArchiOffice-QuickBooks Integration Settings screen. ArchiOffice time entries become QuickBooks Time Tickets.

If payroll is not done through QuickBooks, then there is no reason to send time entries to it. Check the *Do not Send* option for time entries.

For payroll done using other programs, you can either export time entry reports in Excel or send them to QuickBooks and run payroll reports there.

However, there are some integration rules that limit the re-sending of the same time data to QuickBooks.

For example, if you send a time entry to QuickBooks (say for 40 hours) and then change it in ArchiOffice, it cannot be re-sent as it creates duplicate hours. Even if you delete it in QuickBooks, it cannot be re-sent from ArchiOffice because it has already established a Link ID for it.

Expense Entries

You can record expenses in ArchiOffice or QuickBooks. There is no duplication of data involved in the integration process between ArchiOffice and QuickBooks. However, you can only get expenses from QuickBooks. To transfer expenses from QuickBooks, make sure the 'Do not Get' box is unchecked in the ArchiOffice-QuickBooks Integration Settings screen.

Whether you process reimbursable expenses to employees (e.g., travel, mileage, etc.) and other items chargeable to projects (e.g., vendor invoices, materials, etc.) in ArchiOffice or in QuickBooks depends on the accounting software you use and your company procedures.

Expenses in ArchiOffice are tied to employees while expenses in QuickBooks are tied to vendors. Although you can get vendor bills, checks and credit card charges from QuickBooks to ArchiOffice, they are all recorded as *expenses* in ArchiOffice. It might be better to record your expenses in QuickBooks and then bring them into ArchiOffice. You can enter vendor bills in QuickBooks under the Items tab and then send them to ArchiOffice (as an expense entry).

Invoices

Creating invoices in ArchiOffice is the best course of action because it provides details critical to effective practice management. The most common synchronization setting for invoices is to send invoices from ArchiOffice to QuickBooks ('Do not Send' box is *unchecked* and the 'Do not Get' box is *checked* in the ArchiOffice-QuickBooks Integration Settings screen).

There can be an exception to this situation. For example, if you generate product invoices in QuickBooks and you want to record payments for all invoices, then you would not turn off getting invoices from QuickBooks.

Generally, invoices with zero value (\$0) do not transfer from ArchiOffice to QuickBooks.

Payments

You can decide to record payments for invoices and retainers in either ArchiOffice or QuickBooks. Or you can choose the convenience of entering payments in ArchiOffice. Mark the *Do not...* boxes accordingly in the ArchiOffice-QuickBooks Integration Settings screen.

In any case, you should make use of Date Filters in the ArchiOffice-QuickBooks Integration Settings screen to reduce the amount of unnecessary data transferred to the ArchiOffice and QuickBooks databases.

If the 'Transfer 'From retainer' as invoice line item' option is selected on the Send Settings -> Payments screen, the retainer along with the payment is sent over to QuickBooks as a single line item and a single invoice is created. Else, if the option is unselected, the retainer is sent over to QuickBooks as a separate item and two separate invoices (retainer and payment) are created

At times, you can include a late fee or interest charge on your invoices in ArchiOffice (Project-Billing-Options). In such cases, you will receive a payment for the invoice that includes the late fee/interest amount. ArchiOffice transfers the entire invoice amount to QuickBooks.
